SO-101 MNRI

the organization repo - scan to clone

https://github.com/umn-cse-mnri/so101_mnri.git

```
git remote add umn https://github.com/umn-cse-mnri/so101_mnri.git
```

HTTPS on purpose: the umn-cse-mnri organization enforces SAML SSO, so a GitHub SSH key is refused on it unless the key has been authorized for the organization. Over HTTPS a public repo needs no key at all - the URL is the whole credential for reading. Pushing still needs a token: use gh auth setup-git, or a PAT authorized for the organization.
